

PRODUCTION AND SUPPORT JOBS

Production Engineer

Plans and coordinates production procedures including the design and development of efficient production line methods.

Electronics Technician

Installs, repairs and maintains electronic equipment and products.

Product Assembler or Tester

Puts together product components and tests that they work.

Systems Administrator

Maintains and operates a computer system or network. A Systems Administrator is usually charged with fixing general computer problems, installing, supporting, and maintaining servers or other computer systems, and planning for and responding to service outages.
