

SLI SYSTEMS

Who is SLI Systems?

SLI Systems was formed in 2001 and currently employs more than 25 people at offices in the Silicon Valley in California, London, and Christchurch.

What does SLI Systems do?

SLI Systems provides site search, site navigation and automated SEO services for online retail and content-rich websites. These solutions are built with patented Learning Search technology – an intelligent search system that continually learns from customer behaviour to increase sales and conversions.

The organisation also has a Site Champion service which automatically creates optimised pages to increase a retailer's visibility in natural search engine listings and increase site traffic.

Customers like NBC, Etronics.com, Tupperware, ULTA, and hundreds more benefit every day from SLI Systems' search technology.

What types of roles are at SLI Systems?

SLI Systems hires Software Engineers. They say the ideal SLI Engineer has a Computer Science (or equivalent) degree and an interest in the mechanics of the internet. They should be comfortable working with scripting languages (such as perl or PHP) to perform text manipulation and be capable of creating elegant solutions to ugly problems!

What opportunities does SLI Systems offer students?

This organisation is very open to employing recent graduates.
